What is the supercharged laser?

The world's first and only clean-energy laser - all others pollute

**Everything 'painted' by the supercharged laser tests strong:
Food, drinks, clothing, linens, eyeglasses... and YOU, too!**

Also commonly used for wrinkles, pain relief,
speed-healing of animal wounds, and more

We've tested dozens of lasers: All others weaken what it 'paints'

EVERY living thing near electricity tests weak. So far,
not one exception in many tens of thousands of tests.

The world's only clean-energy laser reverses all electrical pollution.

The claim: Everything testing weak by BDORT or QRA test is
unconditionally guaranteed to test strong when briefly lasered.

As little as 1/50th of a second to make ANYTHING test strong using
either of these two respected tests. BDORT is medically patented.

**Life-enhancing cell resonance is a laser beam away,
guaranteed to test strong with BDORT or QRA testing**

Also highly recommended for use on animals in pain or wounded.
Laser 1 minute, 5 to 50x per day, for accelerated healing

**It delivers powerful laser biostimulation for clinical & home use
that's both safe and effective. Supercharge ALL foods, jewelry,
household items, yard and grounds, building materials, metals,
hotel rooms, acupressure & acupuncture points, skin, brain
points, EVERYTHING coming near or into you. Test, and see!**

Stimulated emission, to generate a coherent beam of light, instantly
reversing electromagnetic pollution on everything it "touches"

How is the supercharged laser modified? EIGHT technologies,
all highly advanced, embedding 4,674 beneficial frequencies,
108 to 110 hours of supercharging, delivering beneficial energy.

Proof is better than belief: Learning the one-second energy test is vital
Visit www.QRA.me, or many other QRA sites, to learn in a minute.

**From MisterShortcut,
inventor of supercharging technology
nybodyscan@aol.com**

Supercharges EVERYTHING it touches

Supercharge your engine, headlights & battery, then drive:
EVERYTHING touched by the beam will test strong.
Supercharge homes, streets, light poles... EVERYTHING
By far, this is the most powerful technology in history!

**Megabeams.com
5mw supercharged laser**

Gift of a lifetime... to improve a lifetime

The world's only guaranteed clean-energy
LLLT (low-level laser therapy) is approved by U.S. FDA.

Visit www.QRA.me or BDORT.org

Learn the one-second energy test in a minute or less
Every time, see what makes YOU test strong or weak

Lasering food & drinks breaks the undesirable electromagnetic
layering that pollutes everything that comes near electricity.

This includes most EVERY commercially sold food & beverage,
including those that are organic.

All emf is reversed with even brief lasering, so the stored solar
energy in EVERY real food is delivered to the human intestine.

Many people are surprised to learn that **solar energy is the
one and only source of energy for all life forms.**

Electricity is low-polarity. It steals free electrons, so that energy
in food cannot be successfully delivered to the body (in the gut).

Lasering donates free electrons, energizing every food & drink

100 of 100 tests prove this. This is one reason we urge you to
learn and practice the one-second energy test. It's easy!

Those lasering all their food and beverages have remarked
on benefits to digestion and energy levels, and, RAPIDLY,
needing less food This is unprecedented in human history

In addition to foods, emf radiation is proven to weaken everything.
Use the one-second energy test wherever you are.

Test everything you put near or in you, Laser it, test again.

Once an item has been lasered, it should not need to be treated again (unless subjected to an artificial EMF field again)

1. Energize Your Foods! Use the **supercharged laser** to bioenergetically remediate AND energize every food & drink before consuming them. We recommend that you laser or use FoodBoosters for everything you eat or drink. TEST! See how strong food and drinks test!

Directions: Wave the laser at the food or drink. It can take up to 3 seconds, usually less is enough.

Laser the plate or container, (and your stove/fridge).

If you perform the one-second energy test on food before and after lasering, you may be stunned to see that the 'after' test is ALWAYS strong. Note, most all food items initially fail the O-ring test (testing weak), yet will ALWAYS test strong after being lasered.

On the VERY rare occasions where a food does not test strong after lasering, it is surely wiser not to consume it.

2. Self Help. The unmodified version of this laser was originally designed for external skin application such as wrinkles, rashes, pimples, etc. Notice the difference in using the supercharged laser

We recommend **repeatedly** lasering a target skin area for a few seconds (3 to 5 seconds), as often as you like. The shorter time is because the supercharging makes the process more efficient in delivering the embedded anti-EMF effects. and also delivers precise frequencies. These enhance the body's ability to absorb beneficial, cell-resonant frequencies, where every other laser tested, even when delivering benefit, is also sending toxic EMF pollution into the skin. We've never found an exception

Use the **supercharged laser** on any body area except in the eyes. (Around the eyes is great for wrinkles!) A simple method is to simply shine the energizing laser beam onto a selected body site, such as a painful knee, for 30 to 90 seconds. (Hold the beam steadily over one area, right above the skin, or slowly 'paint' area back & forth).

You might also massage a few drops of a **Body Attar** (an essential oil combination) to nourish and stabilize the pathway energized and opened by the supercharged laser.

A second method is to follow the previous procedure, but then also apply the beam for 3 to 4 seconds on the nearest of your hand-or-foot download areas. For left knee pain, for example, download area is top & bottom of left foot).

NOTE: while the supercharged laser energizes, it does not necessarily eliminate need for mudpacks on any interference fields, laser effects are temporary.

When you do mudpacks, always laser area first. What a difference this makes! Although using the laser before a mudpack is not strictly necessary, it can be very helpful to open up meridian pathways for deeper detoxification, thus, a good idea.

We recommend using the **supercharged laser** on only up to 5 sites (or less) per day initially until the body's meridian pathways become stronger. Then, laser may be used with no known limit through the day, it's purely beneficial.

Application times can vary from 6 to 90 seconds per site initially. For wrinkles, scars, bruises, cuts, infections, longer times may be used (1 to 3 minutes). Longer uses of the laser do no harm, but could evoke unnecessary detox reactions (such as feeling overly tired). Vata body types are the most sensitive to such over-stimulation.

After using the supercharged laser, we recommend drinking 2 oz. of organic aloe in 2 to 4 oz. of filtered water to help cleanse the body of toxins most often released internally after laser use. If you have a QVial, touch it to your GV20, highest point on head, for at least 1/50th of a second. Makes all 365 body points test strong. Megaphotons can also be used (free).

It is a temporary, powerful effect. **Test your body points!**

3. Jewelry: Based on one-second testing, we've observed that most jewelry tested, even fine necklaces, bracelets, rings, etc., even with gemstones such as amethyst, tiger's eye, quartz crystals, diamonds, emeralds, rubies, etc., have become energetically polluted, decreasing their effectiveness in healing power, body protection and quantum resonance, and delivering life-depleting EMF radiation, a function of electrical pollution.

The **supercharged laser** breaks the encoding and allows the original bio-electromagnetic resonance of gemstones and precious metals (such as gold, silver, brass, etc.) to be restored. You'll notice that testing demonstrates dramatic change (from a very weak test to very strong) after laser use.

Gemstones and mirrors are usually more energetically polluted than other items, emitting more EMF radiation). For gemstones, shine laser over one side of a gemstone, such as a diamond ring, for at least 5 full seconds, usually sufficient to reverse the EMF pollution.

Use The Supercharged Laser On ALL Household Items

The supercharged laser does not damage gemstones in any way. Be sure to clear all your jewelry, including rings, earrings, necklaces, bracelets, etc.) by using the supercharged laser, OR QVials, or EnergyVials.

To remediate mirrors, use 'oval' technique. Slowly repeat the tracing of each oval for at least a few seconds.

We DO recommend you laser jewelry before wearing it.

- 4. Home Treatment.** Just as undesirable electromagnetic pollution has been proven to weaken most every food, and anything that's been near electricity, this pollution is also provabl present on most everything in the home, since it's been exposed to proximity to electricity. This includes walls, floors, rugs, furniture, sinks, clothing, shoes, eyeglasses, bed linens, pillows, and much more.

To dramatically increase the resonance of your living environment, just briefly laser everything you intend to have near or inside of you. It's that simple

- 5. Yard and Grounds.** In addition to other commonly encoded items, we have found that often the entire yard around a house (and other grounds areas) may also be encoded – possibly from toxins in municipal water or using commercially available fertilizers or other yard amendments.
- To “unencode” the yard and grounds areas, simply shine the laser in an “oval” on the ground, as in the previously described procedure, until the entire ground area has been done. **Note:** It is especially helpful to test areas of the ground before and after treatment to observe the difference. In order to increase the beneficial Vastu effect (i.e. incoming beneficial earth energies) into your home, treating the ground areas around your home is smart, and **highly** recommended. It's fast, easy, makes it all test strong

- 6. Hotel Rooms.** Thanks to the Torroids we placed on the lasers, you can now travel w/ the laser and not have it ruined by EMF. De-pollute your hotel room. Be sure to keep Torroids on the laser to keep it from being ruined by airport metal detectors, which usually ruins the laser. If you suspect your laser has become encoded, just do the one-second energy test to be sure.

Using the supercharged laser on walls, etc

For large areas, such as a wall, slowly shine the laser light as if tracing a large oval shape (i.e. an oval about 4 feet long and 2 feet wide) over a section of the wall, stand-ing about 4 feet from the wall. Slowly trace the oval on the wall in the same place for three times (this is usuallysufficent to break the encoding of the area inside the oval).

Next, move on to another area of the wall and repeat this procedure. Continue until the entire wall has been lasered. Then move to the next section of the wall and continue until all the surfaces of the walls have been done. Next, move to the ceiling, then the foors. Lastly, use the laser on all interior objects in your home – your bed, all furniture, dishes, clothing, etc. It is especially important to treat all the windows and mirrors in your house.

Remember to remediate the entire exterior of your house with the laser – external walls, sidewalks, roofng, etc. – as much as you can reach with the laser. Laser all external wires, and test!

After remediating home, apartment, school, office, all the area you've remediated give enough energy for you to test &prove. This is the best use of energy already in each environment. People sensitive to subtle energy fields notice the best and most benefits, and fastest. EVERYTHING tests strong when lasered.

Lasering light poles, traffic lights, SmartMeters, and more, you serve your community in ways you can hardly imagine. Here, we don't even address the principles of vastu, which prove that good energy attracts prosperity and peace in the home. Experience it. Vastu is the oldest science on earth, well-worth learning about.

Example: Using the supercharged laser to treat large areas such as a wall.

- A) With the laser's red light, slowly trace a large oval on the wall three times.
B) Move to the next section of wall and repeat. Continue until all wall areas are finished. Remember, to break the “junk” encoding and liberate the full beneficial resonance of building materials, you only have to do this procedure once.

Unmodified Lasers

Due to the intrinsic nature of the typical soft laser (i.e. uni-directional monochromatic light), we do NOT recommend using one that has not been supercharged. Unmodified soft lasers do **not** have the capacity to reverse EMF surrounding most objects. Energetic testing of a common soft laser shows that its use weakens body tissue. Only the supercharged lasers provably make every point in the body test strong (humans and animals, too)

*Before using this laser,
please read the following:*

Caution: Do not shine the light from the laser in your eyes. If shined continuously into the eye for up to 6 minutes, it may cause eye damage. However, if the beam briefly enters the eye momentarily (from moving laser around in the room), this is not a problem (although it's still best to avoid shining beam into the eye).

**Be prepared, by lasering your next battery
Additional energy/benefit when you laser next battery.**

We aim to save you thousands of dollars, by providing you with a good-quality RECHARGEABLE battery.

While the laser is sturdily enough constructed to last for thousands of hours of use, they are delicate.

If you bang or drop them, expect them to stop working. Treat them as the multi-thousand dollar devices they are.

MisterShortcut pursues profits more important than cash, so, please respect the courtesy of low price by respecting your device. It can serve you well for thousands & thousands of uses

Note That Torroids Are Attached

Torroids protect against the laser being ruined by EMF. Although we attach more than one, only one is needed.

Torroids can be glued or taped in place, if need be, &, if they fall off, it's also good to laser them once per year before re-securing to the laser

The photos above are great examples of how to effectively use the **supercharged laser**

C) Using the laser on vaccination sites.

D) Using laser on biofield affected by vaccination site (in this case, hold the laser perpendicular to, and slightly above the vaccination site. Laser the biofield above the site for three seconds. Please see full directions for Vaccination Clearance Procedure).

E) Using the laser on the top of the foot download area.

F) Using the laser on the bottom of the foot download area.

G) Using the laser on the back of the hand download area.

H) Using the laser on the palm side of the hand download area.

NOTE: These instructions & suggestions also apply to the Gen IV Supercharged Laser – July2016
